

Special Topics — ai-time-to-die v2 synthesis

Evidence status: OBSERVED

Observation cutoff: 2026-08-14T04:00:00-07:00

Topic and current finding

Draft 9 of the 57-second ai-time-to-die vertical episode was reviewed with a KEEP on the portal (issue #28). The v2 synthesis converts the measured draft-1..9 work into staging, gates, estimates, pilot options, and orchestration for producing full episodes. The canonical source corpus is 79.0 seconds, which bounds the series to 2-3 episodes before new material is added.

Evidence and analysis

Measured episode template: 8 segments / 57 s at 1080x1920@24. Whole-episode local render wall time is 3-5 minutes (draft-4..8); draft-9 was a ~0.1-minute audio-only remux because the video was byte-identical to draft-8. Provider spend measured 350 credits total (110 + 240). Voice remap: MeanVC2 with the selected Kokoro female voice zf_xiaoyi (V29, KEEP issue #27) converts the canonical dialogue locally in 1-2 minutes. T5 reuses the here-lies-trouble pilot with original audio; provider-gated episodes cost 110-240 credits each when authorized.

Method, limits, and sources

Method: measured renders over nine drafts, portal review vocabulary (KEEP / KEEP-PARTS / REVISE / REJECT), and the local-object dyad records. Limits: the provider resolution cap persists (1080p requested, 720p or 496x864 returned); PGS subtitle burn remains NOT-BURNED; WASM byte-parity is not yet verified. Sources: izzi repository, situationshipin.space review issues #18-#28, and this conversation thread.

topic: ai-time-to-die vertical project v2 synthesis (Phase 6, post draft-9 KEEP)
evidence_boundary: Measured izzi repository records and portal review issues from 2026-08-13/14 only; provider spend bounded to two Seedance jobs.
intended_audience: The project owner and authorized collaborators
output_format: pdf

Phase 6 is unlocked by the draft-9 KEEP (issue #28): synthesize proposed_vertical_v2.md with staging, gates, measured estimates, pilot 1 and pilot 1-3 options, and rizal/ord/eureka orchestration, then generate the devastation-pacific-house-style special-topics record (randoma11y-accent, coda-share) as proposed_vertical_v2.pdf.

Share summary

The draft-9 KEEP closes the ai-time-to-die draft loop: the 57 s episode template, zf_xiaoyi canonical voice remap, two-region bullet text, wild masks, and full-motion review format are all accepted. v2 production is a measured, zero-spend-by-default pipeline over a 79 s canonical corpus.

Aggregated portable prompt

Evidence status: INFERRED — aggregated portable prompt, not transcript.

output_format: pdf
```

Produce ai-time-to-die episodes with the accepted draft-9 pipeline: 8 segments / 57 s / 1080x1920@24, canonical dialogue remapped to zf_xiaoyi via MeanVC2, izzi red-on-white 20 pt two-region bullet text, wild 50% opacity masks, T5 as the HLT stand-in unless provider spend is authorized, shinkansen bed elsewhere, full-motion portal review, validator passing under the 80 MiB budget, estimated against the 79 s canonical corpus bound and the measured 3-5 min per-episode render time.

Sharing boundary

This record may be shared with the project owner and authorized collaborators. Provider prompts and spend receipts remain private and gated.
